

Update Instructions:

Before running the update log into Real Nz Software and note down the data file path. F12 or Help > Real Nz Main Menu.

Make sure ALL users are closed out of Real Nz and you have backed up your data file BEFORE downloading the update.

Server Update:

- Step 1** Download current update from <http://www.realnzsoftware.co.nz/files/realnz2011.exe> or by the new web site downloads area and save to server updates folder (R:\Updates).
- Step 2** Run the update on the server. Find the update folder and double click RealNz2011.exe, ensure the destination directory reads C:\RealNz before clicking next. (All workstations to be closed out of RealNz while this is done)
Note – If you use property management and have a separate icon for this on your desktop, you will also need to copy the update from C:\RealNz\Realnz.lbr and paste into this location and rename to RealNzpm.lbr
- Step 3** Open Real Nz and reattach the datafile (as per location noted down prior to starting update)
- Step 4** Check the update has worked by selecting the main menu and ensuring the version and build now reads the same as the update email you have received.

Workstation Update:

- Step 1** Download current update from <http://www.realnzsoftware.co.nz/files/realnz2011.exe> or by the new web site downloads area and save to server updates folder (R:\Updates).
- Step 2** Run the update on each workstation by selecting the realnz2011.exe file from R:\Updates (All workstations to be closed out of RealNz while this is done)
Note – If you use property management and have a separate icon for this on your desktop, you will also need to copy the update from C:\RealNz\Realnz.lbr and paste into this location and rename to RealNzpm.lbr
- Step 3** Open Real Nz and reattach the datafile (as per location noted down prior to starting update)
- Step 4** Check the update has worked by selecting the main menu and ensuring the version and build now reads the same as the update email you have received.
